PHOSPHOR BOVISAL

Liquid mineral feed for dairy cows.

PRESENTATION

Phosphorus/calcium gel as an adjunct to infusion therapy for parturient paresis (milk fever).
Liquid mineral feed for cows.

GENERAL INFORMATION

About half of all cows suffering from milk fever-related recumbency exhibit subnormal levels of both phosphorus and calcium. When given in conjunction with calcium infusion therapy, Phosphor-Bovisal® substantially reduces the duration of recumbency in hypocalcaemic and/or hypophosphataemic cows.
Phosphor-Bovisal® is well tolerated by the mucosa and highly palatable.

FEEDING INSTRUCTIONS

Pour 1 bottle of Phosphor-Bovisal® directly into the mouth following administration of the calcium infusion.
If the cow is still recumbent after 8 to 10 hours (a rare occurrence), a further bottle of Phosphor-Bovisal® should be administered (if necessary, after a 2nd calcium infusion). If the cow remains recumbent, seek veterinary advice.

COMPOSITION

Minerals.

INGREDIENTS IN WEIGHT/VOLUME

Crude protein 0.0%; crude fat 0.0%;
crude fibre 0.0%;
crude ash 37.3%; calcium 11.0%;
phosphorus 9.0%;
sodium 0.2%; water 90.0%.

PACK SIZE

12 x 500 ml bottles

SHELF LIFE

24 months
